– signatures
– ByteArray
– Stream.sort() which direction it gets sorted
– stream functions, :
– Function<T,V> Predicate<T> Stream<T> Collection<T>
– HashCode-methods
– cannot override final methods
– cannot be subclass of final class

Final (Attributes/Parameters)
TODO

Static (Attributes/Methods)
TODO

### Private (Attributes/Methods)
TODO

Types

```java
long l = 1L; long ll = 0b1l;
float f = 0.0f; long d = 0.0d;
String multiline = """
  Hello, "world"
""";
var ints = new ArrayList<Integer>();
boolean isTrue = 0.1 + 0.1 ≠ 0.2;
```

Variable args

```java
long l = 1L; long ll = 0b1l;
static int sum(int... numbers) {
  int sum = 0;
  for (int i = 0; i < numbers.length; i++) sum +=
numbers[i];
  return sum;
}
```

Implicit casting

Rekapitulation: Primitive Datentypen

Konversionen

→ explizit
---→ implizit (mit evtl. Genauigkeitsverlust)
Sonstige Richtungen implizit

No information loss int→float, to larger type int→long
Sub->Super is implicit, Super->Sub ClassCastException

Try with

```java
try (FileOutputStream output = new
FileOutputStream("filename.txt")) {
  output.write("Hello".getBytes());
} catch (IOException e) {
  System.out.println("Error writing file.");
}
```

Static vs Dynamic types
TODO

Dynamic dispatch

TODO
Equality

```java
s.equals(sOther);          // Strings / Objects
Arrays.equals(a1, a2);     // arrays
Arrays.deepEquals(a1, a2); // nested arrays

class Student extends Person {
  @Override
  public boolean equals(Object obj) {
    if (obj == null) return false;
    if (getClass() ≠ obj.getClass()) return false;
    if (!super.equals(obj)) return false;
    Student other = (Student) obj;
    return getNumber() == other.getNumber();
  }
}
```

String pooling
TODO

Hashing **TODO**

Switch

```java
switch (x) {
  case 'a':
    System.out.println("1");
    break;
  default:
    System.out.println("2");
}
int y = switch (x) {
  case 'a' -> 1;
  default -> 2;
}
```

Visibility

public	all classes
protected	package + sub-classes
private	only self
(none)	all classes in same package

Packages **TODO**
Initialisation
1) Default-Values ↓
2) Attribute Assignments
3) Initialisation block
4) Constructor

Default Values

Type	Default	Type	Default
boolean	false	char	'\u0000'
byte	0	short	0
int	0	long	0L
float	0.0f	double	0.0d

IO
TODO

Stream API
TODO

```java
people
  .stream()
  .filter(p → p.getAge() ≥ 18)
  .map(p → p.getLastName())
  .sorted()
  .forEach(System.out::println);
```

Lambdas
TODO

```java
people.sort(Comparator
  .comparing(Person::getLastName)
  .thenComparing(Person::getFirstName)
  .reversed();
```

Enums
TODO

```java
public enum Weekday {
  MONDAY(true), TUESDAY(true), WEDNESDAY(true),
  THURSDAY(true), FRIDAY(true),
  SATURDAY(false), SUNDAY(false);

  private boolean workDay;

  Weekday(boolean workDay) { // private constructor
    this.workDay = workDay;
  }
  public boolean isWorkDay() {
    return workDay;
  }
}
```

Interfaces default methods

```java
interface Vehicle {
  default void printModel() {
    System.out.println("Undefined vehicle model");
  }
}
```

Interfaces

```java
interface Iterator<T> {
  boolean hasNext();
  T next();
}
class Person implements Comparable<Person> {
  private int age;
  @Override
  public int compareTo(Person other) {
    if (age < other.age) return -1;
    if (age > other.age) return 1;
    return 0;
    // return Integer.compare(age, other.age);
  }
  static int compareByAge(Person p1, Person p2) {
    return Integer.compare(p1.getAge(), p2.getAge());
  }
}
people.sort(Person::compareByAge);
```
