

TODO'S
- p.74,75 - OSPF + IS-IS path cost calculation + path choosing - OSPF has to go through backbone
OSPF
- passive interfaces - flooding - O N1 / O N2 routes - route summarization - synchronizing the lsdb - Fast Reroute (FRR)
IS-IS
- ES-IS, IS-IS: details
BGP
- IBGP split horizon - comparison to IGP - Multihop sessions - NLRI - Aggregate impact (TE) - rework - Best path calculation - Idle → Connect → Active → OpenSent → OpenConfirm → Established - MED explanation - default external cost = 20?
AVAILABILITY
- everything: thanks, past me, that was very informative
MULTICAST
- Link-local multicast (48) - IPv4 MAC Address mapping - IGMP and the querier/Role in Dense Mode/Challenges
TOPOLOGY
- p.59-61 - Slides 40-50 - pros/cons of different topologies
WAN
EVPN
- Route types - IRB diagram
QoS
- Types of traffic - Queuing input/output buffer - IntServ vs DiffServ - QoS classification - DSCP:PHB,CS,AF,EF - rest - Node based vs Routing based?
TODO:
- github repos for IS-IS and OSPF labs - rendezvous point nochmal anschauen - network design components - classic, old, enterprise, evpn etc - next-hop-self - why flagp needed for ebgp - ip address otherwise might not be known in AS internally - cdn lab (tags?) - qos: why do we need it? - how does it work conceptually - voice QoS sensitive to? - spick lukas QoS+
